COMPLETE STEP-BY-STEP SOP

How to Set Up & Activate OmniPost Cloud Bot

From first-time initialization to channel linking and automated broadcasting.

Step 1: Bot Initialization & Access

Open your private chat with the bot to establish connection.

Send /start Command

Type `/start` in your chat. If locked, tap the contact button to request activation from the Master Admin.

Control Panel Appears

Once authorized, sending `/start` will immediately load your interactive configuration dashboard.

Step 2: Granting Admin Permissions

The bot needs administrative access to copy and post messages securely.

1. Open Channel Settings

Go to your source and destination channels, tap Administrators, and add your bot.

2. Enable Key Rights

Ensure **Post Messages** and **Manage Messages** permissions are explicitly enabled.

3. Save Changes

Save the admin settings so the bot can seamlessly process your dispatches.

Step 3: Connecting Your Channels

Register your channels into the bot's memory instantly.

Forward Any Post

Forward a post from your channel directly into your private chat with the bot to quick-link it.

Verify via /channels

Type `/channels` or tap Connected Channels to view all successfully registered channels (up to 20 destinations).

Step 4: Setting the Source Channel

Designate where content is gathered from for your broadcasts.

Tap 'Change Source'

Open your control panel with `/start` and click the 📥 **Change Source** button.

Select Pickup Channel

Choose your source channel from the list. All remaining linked channels automatically become destinations.

Step 5: Activating Dispatches

Choose between manual custom batches or automated background sync.

⚡ Manual Dispatch (1–30)

Tap **Run Dispatch**, reply with any number from 1 to 30 when prompted, and watch posts deliver instantly.

⏰ Automated Background Mode

Toggle Auto to **ACTIVE** and pick your preferred time slot for continuous hands-free operation.

System Fully Operational

Your OmniPost Cloud bot is ready for secure channel management.
